## Assignment question:

Write code and connections in wokwi for ultrasonic sensor. Whenever distance is less than 100 cms send "alert" to IBM cloud and display in device recent events.

## Program Code:

```

The screenshot displays the IBM Watson IoT Platform interface. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A sidebar on the left contains icons for various functions. The main content area shows details for a device named '0410', which is 'Disconnected' and identified as a 'Laptop'. The 'Recent Events' tab is active, displaying a table of events. The table has columns for 'Event', 'Value', 'Format', and 'Last Received'. Below the table, a status indicator shows '1 Simulation running'. An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.
